

SPRING/SUMMER 2022

# FOOTWEAR FOR THE OUTDOORS

Designed, developed and tested in Scandinavia

# GATEWAY1® FOOTWEAR FOR THE OUTDOORS

The Gateway1® brand name is inspired from honouring the same title used in the pioneering days of the USA's birth. Settlers, frontiersmen, fur trappers and other adventurers often named the first chosen landing spot "Gateway One" upon initial passage of the great rivers. These strategically locations had many functions to support the frontiersmen. As hubs of the fur trade and supply chain they were vital for the survival of the next season. By this name we want to express the functionality of our footwear in even the harshest weather and environments in nature, as the choice to get you through, as those "Gateway Ones" performed as the keys to surviving the frontiers.

*A typical "Gateway One" landing spot ca. year 1700*

We have chosen the North American bison, often called buffalo, illustrated in Native American Indian style as our logo – a symbol of strength and survival even under the most severe conditions.

With our Danish and Scandinavian background we strive to express functionality in our design and details.

# GATEWAY1® FOOTGEAR

When we founded Gateway1® the major purpose was to achieve the development of a great product with optimal fit, function and comfort. Besides as reliable as possible, both in quality but certainly also in line with social and environmental responsibilities.

We believe we certainly keep to that ethos.

In the coming season we will be announcing very exciting 'pioneering' news to the active outdoor world with the introduction of highly functional and rugged boots.

Discover the extensive technology behind the Gateway1® boots. Here you will find detailed information about our exclusive Japan-rubber™, G1®-air spacer™, G1® 75 rubber compound, Lynx ICE-GRIP+™, insulated boots for extreme cold temperatures and many other exciting components and features which offer high functionality to answer the demands and needs out in nature.

Please also check [www.gateway1-footgear.com](http://www.gateway1-footgear.com) for detailed information – from how we test the comfort and temperature ratings to our environmental friendly packaging and more.

Enjoy with pleasure.

# PHEASANT GAME

Can be used with  
all types of lug  
soles and tread designs

Exceptional comfort as forefoot  
flexibility stays the same

Wide temperature range  
from mild conditions  
to extreme winter conditions

2-way grip

No compromise  
on wear and tear

Optimal traction and grip  
in cold  
environments

**LYNX**  
ICE-GRIP+™

**DEVELOPED  
AND  
TESTED IN  
SCANDINAVIA**

Lynx ICE-GRIP+™. Patented rubber compound for outsoles.  
Secures optimal grip even in extremely low temperatures.  
Please see page 62 for further information.

Rubber compound in a very strong compound recipe.

Gum rubber outsole for optimal grip.

# RUBBER CONDITIONER

## Rubber conditioner

Style# 990100001

1001 Clear

Volume: 150ml

### ADVANTAGES:

Will care for your rubber footwear to maintain function, extending durability and lifespan.

Rubber conditioner treats the rubber to prevent cracks and drying out.

Built-in UV absorber that absorbs/neutralizes the UV radiation before it "attacks" the rubber. Gateway1® Rubber conditioner does nourish the natural rubber in depth so it remains as good as new and also gets the dirt out of it.

Microscopic dirt particles penetrate rubber and by treating you clean the rubber in depth so the dirt can be removed.

When rinsing after cleaning with water, the dirt is rinsed off.

The UV absorber is built-in to protect the boots against colour fading and hydration.

Both attack the rubber and your boots so they do not feel comfortable anymore.

Rubber conditioner, 150ml

### HOW TO USE:

Clean your rubber boots with fresh water and dry them with a cotton cloth. Spray the Rubber conditioner on all rubber parts and leave it for 2-5 minutes. Wipe off excess Rubber conditioner with a cotton cloth and the boots are ready to be stored in a dry and dark environment preferable less than 20C.

**Never leave your boots in direct light, or sun.**  
**Never dry your rubber boots on the heater.**  
**Never store your rubber boots in a closed bag.**

# PULL-ON CHELSEA

Pull-tab for easy on and off.

Coil lining™ cools and transports moisture away from the foot.

Classic design combined with high technology.

Oil resistant outsole.

# LEATHER BOOT CONSTRUCTION

Footwear with the 100% waterproof and breathable SympaTex® membrane needs a very advanced construction to fulfill the needs of heavy use in the outdoors. Care and clean your footwear for optimal function and prolonged lifespan. Hiking and hunting sets these high demands as we explain in detail.

**Heel notch**  
This flex point makes a unique fit when you need both stability from the upper and flexibility when you sit or walk in difficult positions.

**Heel cap**  
Extra external heel cap unit. Adds stability and support to the foot.

**Lace lock**  
This lock makes it easy to adjust the lacing to whatever fit required. Lace eyes for added fit and comfort is a standard of Gateway1® footwear.

**Stitched rubber rand**  
By stitching the protective rubber rand to the upper you get a very durable construction.

# DEER STALKER

## Deer Stalker 10" 400g

**G1® speed-lacing™**

Style# 300109002

1047 Dark brown

**US size:** 6, 7, 8, 9, 9½, 10, 10½, 11, 11½, 12, 12½, 13

**Last:** G1® athletic fit™

**Stability:** G1® Forefoot max flex™

**Outsole:** G1® Stalker™

**Shank & Insole:** TPU

**Footbed:** G1®-stage3™ footbed

**Lining:** SympaTex® Lunar + G1® memory fit™

**Membrane:** SympaTex® 100% waterproof

**Upper:** 2.0mm full-grain nubuck leather  
+ 900D fabric

### ADVANTAGES:

**Comfort rating:** -15C

G1® speed-lacing™ for easy on and off.

Heel notch secures flexibility in foot joint.

Insulating EVA midsole.

400g 3M THINSULATE™

Reinforced stitched rubber rand.

G1® speed-lacing™

Deer Stalker 10" 400g

Deer Stalker 9" 400g

Deer Stalker 9" 400g

## Deer Stalker 9" 400g

Style# 300109001

1047 Dark brown

**US size:** 6-13

**Last:** G1® athletic fit™

**Stability:** G1® Forefoot max flex™

**Outsole:** G1® Stalker™

**Shank & Insole:** TPU

**Footbed:** G1®-stage3™ footbed

**Lining:** SympaTex® Lunar + G1® memory fit™

**Membrane:** SympaTex® 100% waterproof

**Upper:** 2.0mm full-grain nubuck leather  
+ 900D fabric

### ADVANTAGES:

**Comfort rating:** -15C

Heel notch secures flexibility in foot joint.

Lace lock to secure heel fit.

Insulating EVA midsole.

400g 3M THINSULATE™

Reinforced stitched rubber rand.

# HUNTING PAC EXTREME

## Hunting Pac Extreme 16" 800g

Style# 200109001

1906 Mossy Oak® Break-Up Country®

**US size:** 9-13

**Last:** G1® wide fit™

**Stability:** G1® Stiff medium™

**Outsole:** 4x4 Torsion-stabilizer™

**Shank:** TPU

**Footbed:** G1® frost plug™

**Lining:** Changeable felt liner + 800g 3M THINSULATE™, SympaTex® Lunar

**Membrane:** SympaTex® 100% waterproof.

**Upper:** Fabric + TPU reinforced toe & mudguard.

## ADVANTAGES:

**Comfort rating:** -60C

Speed-lacing

Extra deep outsole tread.

Lynx ICE-GRIP+™ secures optimal grip in min. -45C / +30C.

Highly insulated by felt liner, 800g 3M THINSULATE™ and EVA midsole.

G1® frost plug™ secures ventilation below the foot and prevents condensation from freezing.

# SYMPATEX MEMBRANE "GUARANTEED GREEN"

## Top performance

- 100% waterproof
- Membrane water column > 45,000 mm
- Optimally breathable
- 100% windproof
- Highly elastic, hardwearing, poreless membrane
- Dynamic climate control

## Maximum ecology

- 100% recyclable membrane
- Perfectly safe polyether/ester
- 100% recyclable, PFC-free laminates
- PTFE-free
- Bluesign® approved
- Oeko-Tex® Standard 100 certified
- Fluorocarbon-free treatments

## PTFE-FREE MEMBRANE

The Sympatex membrane is "guaranteed green", which means 100% recyclable like a PET bottle.

It is made of polyether/ester, a compound of polyester and polyether molecules that represents no health hazard. It is PTFE-free and PFC-free and therefore absolutely environmentally friendly and skin-friendly.

Unlike other membranes, the Sympatex membrane is completely free of PTFE (Polytetrafluoroethylene). The production, the landfilling and the combustion can create compounds that are ecologically harmful.

PTFE has been criticised increasingly in recent years, because the fluorine compounds that are used for producing PTFE are suspected to be harmful.

Per- and polyfluorinated compounds can also be released into the environment during the burning or depositing of PTFE. There, they can accumulate due to their long-life cycle.

## UPPER MATERIAL

Textile  
Protection layer  
Membrane  
Intermediate layer  
Lining

Evaporation and wicking to the exterior

Wide distribution of moisture and therefore large-scale activation of the membrane

Absorption of moisture from the foot through the inner lining into the hydrophilic intermediate layer

- Protective layer
- Hydrophilic membrane
- Innovative intermediate layer
- Lining

# FIT OF YOUR BOOT

Depending on style, you will find two different lasts which both offer you a very supportive and comfortable fit.

We offer a women's last which has been specifically developed for the women's feet which are generally narrower in heel and forefoot compared to men's feet.

Also, women's are generally shorter but with a higher in-step being part of the fit. In addition to the fit you will also be able to find different types of forefoot flexibility. The stiffer a forefoot the more stable the boot becomes.

Activities in both field and forest require less stability compared to hilly and mountain environments.

## LAST

### G1® wide fit™

A bit roomy in the toe-box and for high in-step foot.

### G1® athletic fit™

A tighter fit like a running shoe.

## STABILITY

### G1® Stiff max™

Offers maximum support to the whole length of the foot. Mountain activity recommended in addition to whenever you want a very stable walking platform.

### G1® Stiff medium™

Offers some forefoot flexibility and full support. All round recommended.

### G1® Forefoot max flex™

Offers forefoot flexibility and stabilizes the heel area. Field and forest recommended.

### G1® memory fit™

adjust the fit of your foot joint and the heel so it sits correctly in the boot and provides optimal comfort and protection.

PP boardliner covers the full length of the boot to create a stable platform in Gateway1® boots with the G1® Stiff max™ and G1® Stiff medium™.

# GATEWAY<sup>®</sup> SOCKS PROVIDE YOU WITH GREAT COMFORT

Gateway<sup>®</sup> socks feature merino wool to give you the best insulation and climate for your feet. All socks are developed for the outdoors and will provide you with great comfort.

Flat toe seam for added comfort.

Non-colored merino wool for the most natural feeling.

## Ultra kneehigh sock

### Ultra calf sock

Style# 900102001 / 900102002

2149 Olive mélange / 1048 Dark brown mélange

Size: S-XL

70% Merino wool

27% Nylon

3% Lycra

### ADVANTAGES:

Fits to the foot in a comfortable way.

High percentage of Merino wool makes for great insulation and comfort.

Reinforced bottom.

Ultra kneehigh sock

Ultra calf sock

## Boot calf sock

Style# 900102003

2150 Olive / grey

Size: S-XL

34% Merino wool

34% Acrylic

29% Polyamide

2% Elastane

1% Copper

### ADVANTAGES:

Fits to the foot in a comfortable way.

Added Copper reinforces a healthy environment for the foot.

Boot calf sock

## Daywalker crew sock

Style# 900102004

1036 Black

Size: S-XL

33% Merino wool

51% Polyamide

10% Nanoglide

4% Copper

2% Elastane

### ADVANTAGES:

Fits tight to the foot.

Added Copper secures good environment for the foot.

Daywalker crew sock

## Coolmax<sup>®</sup> liner sock

Style# 900102005

1036 Black

Size: S-XL

65% Polyester Coolmax

33% Polyamide - nylon

2% Elastane

### ADVANTAGES:

Can be used as a sock or liner to transport moisture away from the foot.

Coolmax<sup>®</sup> liner sock

# DISCOVER NEW TERRITORIES

Lynx ICE-GRIP+™ is inspired by the Scandinavian lynx and the immaculate grip of its paws. The outsole rubber compound has been developed and tested in the harshest of winter environments in Scandinavia and other parts of Northern Europe.

Lynx ICE-GRIP+™ is featured in foot-wear for general outdoor use such as hiking, hunting or fishing as well as for industrial and work requirements.

## Function

Unlike most rubber compounds, Lynx ICE-GRIP+™ offers 2-way grip. Rather than loose grip at -25°C, Lynx ICE-GRIP+™ can withstand temperatures down to -45°C without losing grip.

## The compound has been tested in the field and the lab.

Inspired by traditional table tennis bats with two different rubber compounds, the outsole rubber compound of Lynx ICE-GRIP+™ is developed in such a way that it uses the grip function when needed, while the durable reinforcement part of the compound is used in areas of critical wear.

The rubber compound is based on a formula of natural rubber mixed with synthetic rubber as known from winter tires for vehicles.

However, people need a special type of grip in order to break in the heel and forefoot of the footwear. Thus, the compound is placed strategically, optimising the footwear's grip and reinforcement. Typically, you use a softer and less wear-resistant compound to obtain better grip in cold environments, but by combining grip and reinforcement, Lynx ICE-GRIP+™ offers an optimal solution. Outsole treads vary and are often based on the type of activity that the footwear is developed for.

Natural rubber is a mix of pure natural rubber mixed with additives to be used in a rubber boot. The rubber compound is rolled and prepared into rubber pieces which is die-cut and hand layered over the boot last. Later the whole boot is vulcanised for 100% waterproofness. All boots are tested in the bulk production output. The boots are fully handmade by proud traditional hand craftsman.

Side-zip medial or lateral design for optimal pulling on and off of the boot

Heel kicker design makes for easy removal of the boot

- G1 75** G1 75 The best rubber compound with optimal flexibility. By adding lamination of different rubber layers you obtain the strongest rubber called Japan-rubber™ technology.
- G1 70** G1 70 High technology rubber compound combined with the classic "sticky" rubber feeling which is a certificate of a durability and high quality. Several styles with this rubber compound also features the Japan-rubber™ technology.
- G1 62** G1 62 A very strong rubber compound developed to resist the use in environments like farming and equestrian.

# JAPAN-RUBBER™ TECHNOLOGY

All styles in the Pheasant Game, Pro Shooter, Woodbeater, Icebeater and Moor Country series features the Japan-rubber™ technology.

**Japan-rubber™**  
Multi-layer natural rubber  
laminated together with a rubber net  
– which obtains extra reinforcement  
and protection.  
Up to 2.5 times stronger in flex-test.

*This is an extract from the Japanese  
patent application description*

# RUBBER BOOT DETAILS

## Gusset strap & buckle

Adjustable upper with a flexible gusset to optimize fit of any calf size.

## "Key hole"

to cover the zip strap.

## G1®-flex calf™

with high abrasion resistant Spandex cover.

## YKK side-zip

in medial design – easy access, on and off.

## Spandex cover

The elasticity and strength (stretching up to five times its length) of Spandex fabric reinforces the upper to prevent damage when walking through scrub and other dense undergrowth.

## YKK side-zip

in lateral design – easy access, on and off.

# TECHNOLOGY OF AN OUTSOLE

The function of an outsole decides which type of outsole the boot should feature. Here we describe the basics of our outsoles which actually consist of several parts which when combined is an outsole system.

## Cup-sole

Shock-absorbing heel unit

The outsole surrounds the upper and provides stability.

Heel kicker for easy off the boot.

## Cemented sole

Molded EVA

TPU shank

Shock-absorbing and insulating molded EVA midsole. Provides protection and comfort like a running shoe.

TPU shank

External and internal TPU shank system provides optimal stability on any ground surface.

# COIL LINING™

The Coil lining™ features a special developed pattern to transport moisture effectively away from the foot and leg during activity.

Used alone it creates a cooling effect, or combined with neoprene, G1®-air spacer™ and / or 3M Thinsulate™ for insulation properties.

Coil lining™ + 5mm neoprene  
Secures optimal moisture transportation

# OUTSOLE SYSTEMS

The outsole helps you to move in the best way.  
It can control take-off, stability, shock absorbing, grip- and braking abilities  
so you can focus more on the outdoor nature experience.  
Often you will find a 90-degree heel design on the outsole.  
This is required for many activities in order to support a fixed point for the foot.

**4x4 Arrow deep-grip™**  
Top performance  
shock-absorbing, stability  
and insulation. Optimal  
grip with deep-tread and  
Lynx ICE-GRIP+™.  
Cemented.

**4x4 Torsion-stabilizer™**  
Running shoe comfort  
with added grip zones and  
Lynx ICE-GRIP+™.  
Cemented.

**All-terrain gripper 2.0™**  
Comfort as a running shoe  
with 4x4 grip and added  
width for stability.  
Cemented.

**Mud-field™**  
Hunt in demanding terrain  
with LYNX ICE-GRIP+™.  
Cup-sole.

**Field-sport™**  
Stability, grip and durability.  
Cup-sole.

**Country F/T™**  
Classic tread.  
Cup-sole.

**Torrential-grip™**  
Gum rubber outsole  
for optimal grip.  
Cup-sole.

**Rainmaster™**  
Flexible and good grip.  
Cup-sole.

**G1 Stalker™**  
Lightweight and comfort  
as a running shoe.  
Cemented.

**Foreman SD™ oil resistant**  
90-degree heel design  
for added support.  
Oil resistant high-abrasion  
compound.  
Direct attached.

**G1 calendar™**  
Rough outsole profile  
for good grip in wet and  
snowy ground.  
Vulcanised.

# COMFORT RATING

Woodbeater 18" 7mm

With the comfort rating we estimate the lowest temperature where you have warm feet in low or zero activity. Depending on your body, socks and clothing this can vary but the comfort rating is a good indicator. We have tested all our footwear very aggressively and made conservative estimates, so you might experience activities in far lower temperatures with warm feet which is only an advantage to you. We always test with various conditions and people in addition to the laboratory climate chamber environment.

## 3M THINSULATE™

We insulate many styles to give you warm feet by using the unique G1@-fleece or Coil lining™ + 5mm neoprene + 2mm G1@-air spacer™. For the highest insulation we add up to 800g 3M Thinsulate™ – check out which style will fit your requirements.

# FOOTBEDS

The footbed supports the foot and provides shock absorption. Gateway1@ footbeds is designed and developed to optimize fit and comfort depending of which boot you use.

### G1@-stage1™ footbed

Molded EVA with extra shock absorbing pads in heel and forefoot.

### G1@-stage2™ footbed

Blown PU for extra breathability. Supportive and shock-absorbing properties.

### G1@-stage3™ footbed

Style# 980102002

1061 Caramel

US size: 3-17

Lining: Fabric

Base: Shock-absorbing P.U.

### ADVANTAGES:

Orthotic shape to lock the foot and secure good take-off. Shock-absorbing P.U. secure an all-day activity with great comfort. Packed in a nice poly card box.

G1@-stage1™

G1@-stage2™

G1@-stage3™

# GATEWAY1® FIT

## ENJOY THE FIT & COMFORT

### Gateway1® fit

The women's foot is in general anatomically different from a man's foot.  
Women's have typically a more narrow heel and forefoot.  
The in-step and arch has a more steep angle.

This means the fit of the boot needs to be different in order to obtain the best fit and comfort which Gateway1® footwear are so famous for.

So we use different lasts and not only "scale" a last.  
We have extended the fit to include the same for the calf fit.

Enjoy the fit & comfort.
